[info@vrgochair.com](mailto:info@vrgochair.com)

## For all head mounted displays

---

1. The VRGO calibrates when you first turn it on. Press the button on the front when you have found your preferred sitting position.

2. If you find that you are already moving within VR but think you are in your centred position you can recalibrate by turning the VRGO off (hold button down) and on again.
